add a continue as guest option

Here's an updated **design outline with "Continue as guest"** added, so you can paste it directly into Lovart.

Design Outline – ShareCare Web App (with Guest Access)

App name: ShareCare
Purpose: Peer-support web app where diabetes patients and caregivers share experiences, recipes, exercises, and daily tips (no clinical tracking).
Tone: Calm, warm, and supportive (soft colors, rounded cards, subtle shadows).

1. Landing / Home Page

- Hero section:
  - Heading: *"Share your diabetes journey. Learn from others."*
  - Subheading: *"Join or explore the community without signing up."*
  - 3 buttons:
    - `Log in` (primary)
    - `Sign up` (outline)
    - `Continue as guest` (text/small button, linking to read-only feed for guests).
- "How it works" cards:
  - Same 3 cards (Share, Connect, Stay safe).
- Footer:
  - Safety note: *"This is peer support content, not medical advice."*

2. Login Page

Add a new section below the form:

- Buttons:
  - `Log in`
  - `Create an account` (links to sign-up).
- Small row:

- `Or` → `Continue as guest` (text link in muted color).

When guest is clicked:

- User lands on the **Community Feed**, but:
  - Cannot post, like, or comment.
  - No sidebar items like “My Posts” or “Bookmarks”; only “Home / Feed”.
  - No avatar / profile menu; only a `Log in` or `Sign up` in the top-right.

3. Sign-up Page

Same as before, but add:

- Bottom text link row:
  - `Already have an account? Log in`
  - `Or explore as guest` (takes user back to feed as guest).

4. Dashboard / Community Feed (Logged-in)

- Sidebar items (same as before):
  - Home / Community
  - My Posts
  - Bookmarks
  - Settings
- Top bar:
  - Avatar + dropdown: `Profile`, `Settings`, `Logout`.
  - Button: `New Post`.

When user is logged in, all features (post, like, comment, save, report) are enabled.

5. Community Feed (Guest User)

Guest-mode feed should look **almost the same** but with limited interaction:

- Same post cards with title, body preview, images, tags.
- No:
  - Like heart / comment icons (or show them but disabled).
  - “Report” or “New Post” options.
- Top bar:
  - `ShareCare` logo.
  - Right side: `Log in` or `Create account` (no avatar / dropdown).

- Hint text (optional):
  - Banner above feed: *"Sign up or log in to like, comment, and share your experiences."*

6. New Post / Create Post Screen

Keep unchanged, but protected:

- Only shown if user is logged in.
- Guests who try to access `New Post` are redirected to a small "Please log in to create posts" modal or page with:
  - `Log in` and `Sign up` buttons.

7. Single Post / Post Detail Page (Guest)

On the post detail page, for guests:

- Show:
  - Title, body, images, tags, and comments.
- Hide / disable:
  - Like heart, comment text-area, or show them in a disabled-state.
- Top:
  - Link/icon: *"Save this post to bookmarks by creating an account."*

Now you can copy this whole outline (including the **guest flow**) and paste it into Lovart to generate screens for both **logged-in** and **guest** experiences.
